

NGUYEN VIET BAO

LOGISTICS AND INDUSTRIAL SYSTEM ENGINEERING

bao.nguyen2210ise@gmail.com | (+84) 83 863 8070

Thu Duc, Ho Chi Minh City

PROFILE

Logistics and Industrial Systems Engineering graduate with hands-on experience in manufacturing digitalization, data analysis, process improvement, and cross-functional project execution. Skilled in translating shop-floor issues into practical workflows, digital applications, data models, and operational dashboards. Strong in structured problem-solving, manufacturing process control, and stakeholder coordination, with a focus on improving operational efficiency, production visibility, quality compliance, and data-driven decision-making across factory operations.

EXPERIENCE

TECHTRONIC INDUSTRIES VIETNAM MANUFACTURING CO., LTD.

Dec. 2025 - Present

Production Leader – Manufacturing Digitalization & System Projects

- Coordinate **plant-wide manufacturing digitalization and process-improvement projects** across Production, IPQC, Warehouse, PMC, Automation, and IT. Translate operational requirements and shop-floor issues into process designs, functional requirements, business rules, data structures, UAT scenarios, deployment plans, and scalable digital solutions for factory operations.
- Design and implement **factory-level applications** for Production Quality Gate, Buy-off, FAI, BOM validation, and pending-job control using Power Apps, Power Automate, SharePoint, Databricks SQL, and Power BI to improve process visibility, approval tracking, exception management, and coordination between Production and Quality.
- Develop **manufacturing traceability and data-audit solutions** by consolidating data from EOL, OneKey, Openlink, ERP, and production systems. Apply SQL-based data processing, validation rules, and job-level matching to identify trace gaps, serial mismatches, duplicate events, abnormal model movements, and production-data exceptions.
- Designed and built a **full-stack web application** covering the front end, back end, data architecture, role-based access, and end-to-end operational workflow to digitalize the factory-wide material shortage handling process between Production and Warehouse. The solution covers request submission, approval routing, material and inventory validation, Warehouse processing queues, reservation, expected availability time, status tracking, transaction history, and planned-versus-actual lead-time analysis.
- Supported the design and process integration of the **Auto GI system**, a plant-wide initiative covering packing traceability, Tool SN-to-box association, carton-to-pallet aggregation, packing-quantity reconciliation, Production/QC checkpoints, ERP Goods Issue requirements, exception handling, and Warehouse readiness.
- Developed the **BOM Difference Tracker** to automate BOM-version comparison, abnormal-change identification, mandatory-data validation, status tracking, and historical records using Power Apps, Databricks, Power Automate, SharePoint, Office Scripts, and Power BI, strengthening changeover control and Line Leader process compliance.
- Built a **workforce and capacity planning tool** integrating multi-week production demand, required headcount, available manpower, hiring constraints, production capacity, and cross-zone transfer scenarios to support factory-level resource planning and management decision-making.
- Conducted **time studies, bottleneck analysis, work-element balancing, and manpower optimization** for 13 Grinder-family models, reducing average headcount by 2–3, improving line-balancing efficiency by 15%–25%, and increasing UPH by 10–20 per model. Improved four D&F-family models by 10–30 UPH and achieved approximately **USD 90,000 in total savings** through cycle-time reduction and workstation-capacity improvements.

- Worked with Process Engineer to update molding machine parameters with actual production conditions.
- Coordinated with suppliers: requested quotations, created PO (Purchase Order), and completed related documentation for relevant departments.
- Supported Manufacturing Engineers in updating OIS (Operator Instruction Sheet), identifying technical issues during operation and finding root causes; coordinated with Assembly and Quality to build and evaluate samples after Kaizen, mold repair, or for customer approval.

- Managed import, export documentation and processed container declarations through port e-systems, including ePort, SmartPort,... for more than 20 customers with an average volume of around 10 containers per day.
- Consolidated booking details, VGM data, and container information from customers into a centralized container plan to support daily scheduling, operational reporting, and shipment tracking.
- Coordinated closely with shipping lines, terminals, depots, and customers to resolve documentation and data discrepancies, secure empty-container releases, and ensure all shipments met port and vessel cut-off times.
- Monitored daily shipment status, updated operational records, and maintained accurate container data to ensure smooth coordination between customers and port-related stakeholders.

EDUCATION

- **Bakery business project:** Analyzed demand, designed subsystems, conducted cash-flow analysis in MS Excel, and managed the project timeline using MS Project.
- **Thesis - Optimizing transportation routes:** Analyzed tank-truck transport issues at Gas Shipping and applied the Vehicle Routing Problem model in Python to design a cost-minimizing scheduling solution.
 - **Result:** Reduced total transport cost by 6.47% - 10.56% and improved overall fleet utilization efficiency compared with manual planning.

SKILLS

Analytics & Systems	Power Query, SQL, Python, Databricks, ERP (Oracle)
Automation & Apps	Power BI, Power Apps, Power Automate, SharePoint, Office Scripts
Office	MS Word, Excel, PowerPoint, MS Project

CERTIFICATIONS

- TOEIC Listening & Reading: 875/990
- TOEIC Speaking & Writing: 245/400
- Python Basics - University of Michigan
- Business Analytics with Excel - Johns Hopkins University

EXTRACURRICULAR ACTIVITIES

- Planned and coordinated public, internal, and community activities for the club, including an online photography contest and the Spring Volunteer Campaign.
- Served as an organizing committee member, supporting event planning, task allocation, timeline management, communications, participant engagement, and event execution.
- Coordinated with club members and relevant stakeholders to ensure activities were delivered according to schedule and organizational objectives.

- Co-organized “THE MOMENT” online photography contest, supporting concept development, communication, participant coordination, and contest implementation.
- Supported the planning of the department’s anniversary ceremony by developing the event timeline and coordinating preparation activities with student teams and department representatives.
